Program index to volume 70

Atomic physics

ACHN, ccMBPT-4t (Fortran, 839 lines). Diagrammatic many-body perturbation expansion for atoms and molecules. VIII. *cc*MBPT-4
Moncrieff, D., V.R. Saunders and S. Wilson 70 (1992) 345

Computational methods

ACGY, COEFF (Fortran, 1170 lines). A computer program for the calculation of angular-momentum coupling coefficients
Fang, D.F. and J.F. Shriner Jr. 70 (1992) 147

ACHL, LIE_A0, LIE_A1, LIE_A2 (Pascal, 15976 lines). Programs for symmetry adaptation coefficients for semisimple symmetry chains: the general case
Ramek, M. and B. Gruber 70 (1992) 371

ACHJ, INTRP3 (Fortran, 1273 lines). A multivariant interpolation routine for a random distribution of data points
Lou, Y. and B. Johansson 70 (1992) 389

ACHW, W9J (Fortran, 509 lines). Exact computation of the 9-*j* symbols
Shan-Tao, L. and C. Ying-Nan 70 (1992) 544

ACHR, SMM (Fortran, 599 lines). Fast sparse matrix multiplication
Park, S.C., J.P. Draayer and S.-Q. Zheng 70 (1992) 557

Computer algebra

ACHP, PTEST.RED (Reduce, 1789 lines). A constructive REDUCE package based upon the Painlevé analysis of nonlinear evolutions equations in Hamiltonian and/or normal form
Renner, F. 70 (1992) 409

ACHT, BIRKGUST (Mathematica, 475 lines). Computing normal forms of nonseparable Hamiltonians by symbolic manipulation
Raines, P.E. and T. Uzer 70 (1992) 569

Computer languages, hardware and software

ACGV, JETNET 2.0 (Fortran, 3349 lines). Pattern recognition in high energy physics with artificial neural networks – JETNET 2.0
Lönnblad, L., C. Peterson and T. Rögnvaldsson 70 (1992) 167

ACHQ, FORTNET (3L) V1.0 (Fortran, 3863 lines). Fortnet (3L) v1.0: implementation and extensions of a message-passing harness for transputers using 3L Parallel Fortran
Cooper, R.K. and R.J. Allan 70 (1992) 521

Condensed matter and surface science

ACHV, SCT89 (Fortran, 22268 lines). SCT89: a computer code for atomic and molecular scattering from clean and adsorbate covered surfaces
Sanders, D.E., M.S. Stave and A.E. DePristo 70 (1992) 579

Elementary particle physics

ACGZ, STRTEN (Fortran, 1647 lines). Measuring the string tension in random surface models with extrinsic curvature
Irbäck, A., J. Jurkiewicz and S. Varsted 70 (1992) 59
ACHG, TAUOLA, version: 2.1 (Fortran, 1193 lines). The τ decay library TAUOLA, update with exact $O(\alpha)$ QED corrections in $\tau \to \mu(e)\nu\bar{\nu}'$ decay modes
Jeżabek, M., Z. Wąs, S. Jadach and J.H. Kühn 70 (1992) 69
ACHC, KRONOS (Fortran, 5311 lines). KRONOS – A Monte Carlo event generator for higher order electromagnetic radiative corrections to deep inelastic scattering at HERA
Anlauf, H., H.D. Dahmen, P. Manakos, T. Mannel and T. Ohl 70 (1992) 97
ACHB, HEPAWK (Fortran, 5196 lines). hepawk – A language for scanning high energy physics events
Ohl, T. 70 (1992) 120
ACGV, JETNET 2.0 (Fortran, 3349 lines). Pattern recognition in high energy physics with artificial neural networks – JETNET 2.0
Lönnblad, L., C. Peterson and T. Rögnvaldsson 70 (1992) 167
ACHI, BHLUMI version 2.01 (Fortran, 6655 lines). Monte Carlo program BHLUMI 2.01 for Bhabha scattering at low angles with Yennie–Frautschi–Suura exponentiation
Jadach, S., E. Richter-Wąs, B.F.L. Ward and Z. Wąs 70 (1992) 305
ACHH, MUNI (Fortran, 2582 lines). The $\mu(x, \beta, \alpha)$ function and its role in the analysis of the QCD-SVZ sum rules
Ayala, C. 70 (1992) 401

Molecular physics

ACHN, ccMBPT-4t (Fortran, 839 lines). Diagrammatic many-body perturbation expansion for atoms and molecules. VIII. *cc*MBPT-4
Moncrieff, D., V.R. Saunders and S. Wilson 70 (1992) 345
ACHM, MORSMATEL (Fortran, 295 lines). MORSMATEL: a rapid and efficient code to calculate vibration–rotational matrix elements for r-dependent operators of two Morse oscillators
Lopez-Piñeiro, A., M.L. Sanchez and B. Moreno 70 (1992) 355
ACHO, KROSC1 (Fortran, 626 lines). Numerical evaluation of Kratzer oscillator matrix elements
Tuzun, R.E. and D. Secrest 70 (1992) 362
ACHK, ACTCON (Fortran, 1121 lines). Vectorizable wave propagation FORTRAN-code for calculations of multiphoton dissociation
Ting, J.J.-L., J.M. Yuan and T.-F. Jiang 70 (1992) 417

ACHT, BIRKGUST (Mathematica, 475 lines). Computing normal forms of nonseparable Hamiltonians by symbolic manipulation
Raines, P.E. and T. Uzer 70 (1992) 569

Nuclear physics

ACHD, LASPE (Fortran, 2144 lines). LASPE: a subroutine for generating straggling distributions for positrons and electrons
Heddle, D.P. and L.C. Maximon 70 (1992) 77
ACHA, SOS (Fortran, 1016 lines). SOS: sequential or simultaneous nuclear multifragmentation
López, J.A. and J. Randrup 70 (1992) 92
ACGW, CFPSIB (Fortran, 833 lines). A new FORTRAN program for the CFP's of a system with identical bosons
Liu, Y.X., H.Z. Sun and E.G. Zhao 70 (1992) 154
ACGI, TRIAXI (Fortran, 792 lines). Photon absorption and scattering cross-sections by triaxial nuclei
Bortolani, E. and G. Maino 70 (1992) 207
ACHE, CSPE_BOUND_RESONANT (Fortran, 1727 lines). Calculating bound and resonant states in local and nonlocal Coulomb-like potentials
Papp, Z. 70 (1992) 426
ACHF, CSPSE_SCATTERING (Fortran, 1508 lines). Calculating scattering states in local and nonlocal Coulomb-like potentials
Papp, Z. 70 (1992) 435

Plasma physics

ACGT, ECRCYL (Fortran, 2663 lines). ECRCYL: a code for electron cyclotron radiation transport
Chaturvedi, S. and R.G. Mills 70 (1992) 183

Statistical physics and thermodynamics

ACHS, LOOPS (Fortran, 475 lines). Swendsen–Wang dynamics for the Potts model on a dynamically triangulated random surface
Burda, Z., J. Jurkiewicz and L. Kärkkäinen 70 (1992) 510
